## Surface Water Assessment

**Reference No:** FUL/2025/0066

**Proposal:** Construction of a Calf Housing Barn

**Site:** How End Farm, How End, Thursby, CA5 6PX

### Surface water assessment in relation to the existing water course

The water collected from the roof will be collected via guttering and downspouts. This will be clean water and the guttering will be connected to the clean water drainage system. It is not believed this proposal would cause any problems relating to surface water and drainage.
